

Milestone 2 Link:

<https://cuboulder-csci-3308.herokuapp.com/ProjectMilestones/ProjectMilestone2/index.html>

ToDo:

- Project Features List
 - Weather API
 - Show the high/low temperatures of the resorts, as well as the chance for precipitation. (Various weather APIs exist, should be easy to find a simple one to implement)
 - Map of resorts
 - Get a map of resorts and their distances from the user, as well as provide a map to reach the resort. (Google Maps API?)
 - Information of the resorts
 - Get information about the chosen resort, including reviews, prices and the various runs.
 - Stat Tracker
 - This will allow the user to log best runs from throughout the season and keep track of their total days on the mountain. (Keep track of IPs in correlation to resort location? Could help with ensuring people are in the resort)
 - User Management
 - Keep track of the people who have registered to the site, as well as when they're logged in and what they have access to. (Make some sort of script to write user info to a text document? This will prevent people from making accounts with the same names)
 - Front end website
 -
- Requirements - will add user stories pertaining to each feature listed above and prioritise them by weighing the criticality of each user story
 -
- Project Plan
 - Order of development
 - 1. Front end website
 - 2. User management
 - 3. Map of resorts
 - 4. Stat tracker
 - 5. Weather API
 - 6. Information on Resorts
- Wireframe and Design
 - Separate PDF within the github repository folder called WireFrame.pdf. It is in the same folder as the project milestone 2.
- Project Management
 - Trello Board Link:
 - <https://trello.com/b/pf4cmGnu/development-plan>

- Trello is a Kanban board
- Individual Contributions
 - Caleb Caulk - Team Scribe/Wireframes
 - I have made the github folders and organized the github repository. I am also the team scribe so I take the notes during the TA meetings. Also have designed the webpage layout with the wireframes.
 - Latest commit
 - https://github.com/CSCI-3308-CU-Boulder/3308SP21_section014_8/commit/a5b9981966a6a4c06985d9e03105f3408ec46210
 - Neo Rieck - Project Features List
 - I made a general outline for what we need for the main aspects for our project, as well as general descriptions of what we should do and what might be worth checking out
 - https://github.com/CSCI-3308-CU-Boulder/3308SP21_section014_8/blob/master/README.md
 - Bill Black - Requirements
 - I updated the scrum board with project features that weren't already listed. I also added several user stories and edited several of the user stories and epics that were already listed.
 - https://github.com/CSCI-3308-CU-Boulder/3308SP21_section014_8/commit/d40f4cc26ecaf006887362944ce9a58fd1652dc0
 - Drew Hockstein - Project Plan
 - I set up a trello account for our team and set up the project board in trello. I also marked down the schedule of when we will complete tasks. Trello allows us to easily set up a kanban board that our whole team can see and edit.
